Usability Testing	
UX Audit	

Languages

English – **B2**
Ukrainian – **Native**

Education

UX course Jun 2022
Main Principles of UX design and UX Research

Beetroot academy Jan 2021
UI/UX Design Course (Basic)

Taras Shevchenko National University of Kyiv 2017 – 2021
Bachelor's Degree in Philology

Product Designer with **5 years of experience** in web and mobile products across CRM, SaaS, and consumer apps. Comfortable taking on projects from a raw idea — defining scope, shaping features, and bringing them to a finished design. Actively **integrate AI tools** into the design process to accelerate concept exploration, prototyping, and ideation. Experienced across the full design process: research, wireframing, UI, and working closely with developers and stakeholders.

Employment history

08/2021 – now — 1648 Factory — **UI/UX Designer**

Sports Performance Tracking App

A mobile app for a training center that helps athletes book assessments, follow personalized programs, and track physical progress — while coaches monitor development through an admin panel.

- Conducted discovery sessions to define product scope and feature set based on a raw client concept
- Designed end-to-end user flows covering booking, assessment, and progress tracking
- Created wireframes and UI for the mobile application
- Developed design system for the product
- Designed the admin panel for coaches to manage users and track training progress
- Delivered designs that moved the product into active MVP development

E-Commerce for Bike Shop

A full redesign of an e-commerce platform for a used and refurbished bicycle shop. The project addressed declining sales and poor post-purchase communication — users had no visibility into order status after buying. Included an AI-powered bike finder and an admin panel for mechanics to inspect and rate bicycles.

- Conducted in-depth UX audit and page-by-page analysis to identify usability issues
- Performed competitor analysis across key pages to benchmark and improve design decisions
- Redesigned end-to-end user flows including browsing, purchase, and post-purchase communication
- Developed UI from scratch with a focus on visual clarity and conversion
- Designed AI-powered bike recommendation feature
- Designed admin panel for mechanics to manage inventory and quality ratings
- Delivered designs that moved the full product into active development

CRM System

An internal CRM tool for an IT company designed to streamline employee allocation across projects and improve revenue tracking. Designed the full product from scratch based on research with internal stakeholders

- Developed design system from scratch to establish a consistent design foundation
- Conducted competitor analysis to gather insights
- Developed intuitive information architecture to optimize user navigation
- Created full product designs based on research with internal users and managers

AI-Assisted Communication Project

An AI-powered web and mobile platform helping users resolve personal issues through AI assistance or connection with real experts. Joined the project as a supporting designer to improve the existing product.

- Conducted UX Audit to identify critical usability problems
- Analyzed user behavior to make design improvements
- Designed solutions to enhance user experience
- Collaborated with stakeholders to align design changes with project goals

SaaS, Enterprise Software Project

A custom SaaS tool for a consulting company to replace Excel-based workflows for tracking employee engagement and project profitability across locations. Led the project independently from discovery to final delivery

- Created wireframes to define product structure and validate logic with stakeholders
- Developed design concepts based on wireframe feedback and alignment sessions
- Built design system from scratch to ensure consistency across the product
- Conducted usability testing with real users to validate design decisions and gather actionable feedback

Cryptocurrency Project

A concept project for a trading platform allowing traders to generate and track market proposals. Worked from an undefined scope — researched the domain, defined requirements, and delivered multiple design concepts for client evaluation.

- Analyzed competitors and researched the trading domain to inform design decisions
- Defined product scope based on limited initial requirements
- Developed multiple design concepts and presented them to stakeholders for feedback
- Built design system to support concept exploration

Design System from Scratch

An internal design system built from scratch for the company, used across all internal and client projects. Structured around atomic design principles — from base components to full page modules

- Analyzed upcoming projects to define required component scope
- Built atomic component library including buttons, inputs, modals, badges, and cards
- Designed modular page templates including dashboards, user profiles, and settings screens
- Ensured scalability and consistency across all company products
